**Erratum: Phonon properties of (311) GaAs/AlAs superlattices**  
**[Phys. Rev. B 49, 7577 (1994)]**

Z. V. Popović, E. Richter, J. Spitzer, M. Cardona, A. J. Shields, R. Nötzel, and K. Ploog

The space group of (311)-oriented GaAs/AlAs superlattices is  $C_3^2$  (monoclinic face centered) regardless of whether the number of monolayers is odd or even. This perception is complicated in Fig. 1 because we have displayed twice the crystallographic unit cell in the  $[01\bar{1}]$  direction.

The error does not change the conclusions of this paper.
